

Analogue Model Files

A) Images

Movies of the analogue models were captured with a high-speed video camera at 900-1000 frames per second. Every tenth frame was extracted from the original camera files using the accompanying MemView software, and saved in a folder with the run name as used in the thesis.

B) Movies

The original MemView movie files, which can only be viewed with the camera's programme, were converted into .avi files to make them viewable on standard movie programmes. The .avi file of run R-02 is rendered unplayable, and therefore not included.
